LNDS reveals its 2024 Annual Report: Driving Impact from Reuse of Data Across 10 Domains

Luxembourg – 26 June 2025: [Luxembourg National Data Service \(LNDS\)](#) is proud to announce the publication of its Annual Report 2024, reflecting on a year of significant growth, driving impact from secondary use of data together with its partners across 10 different domains.

In 2024, LNDS focused on expanding its portfolio of data services, releasing 5 new services and 5 new platforms, enabling to provide enhanced support to its data partners in creating impact from the reuse of data. Data protection by design and default, remains a key focus in LNDS processes, embedding privacy considerations in all new services and products, led by its Data Protection Officer and the Ethical, Legal, and Social Implications experts.

“We are proud of the growth of our team and service offering, as well as the expansion of broadening our support to more domains, including health, education, mobility, environment, energy, and connectivity among others. This expansion allows us to identify and drive synergies in expertise, services, and tools that can make a significant impact across sectors.”, said Bert Verdonck, CEO of LNDS.

Indeed, the data projects became more diverse, now encompassing 10 different sectors among the 106 encoded data projects and proposals. In total 23 projects were completed, supporting various administrations and organisations across the end-to-end data journey. Projects included improving data discovery through developing data catalogues and inventories, and enriching data management through enhanced structuring of data and comprehensive data management plans.

Since its inception in 2022, LNDS has brought in 5,4 MEUR in subsidy funding. The number of involvements in European level projects doubled in 2024, growing into 15 projects, across four different programmes from health data reuse to building an energy data space. Involvement in European level projects and initiatives facilitates to position Luxembourg at the heart of Europe’s digital transformation, through fostering knowledge sharing and interoperability. LNDS’ input has been crucial also on national level, supporting the Luxembourgish government in implementing European legislation.

“In 2024, the LNDS team made significant contributions to updating the national Data and AI strategies and supported various teams in defining flagship projects aimed at driving major societal and economic impact.”, stated Romain Martin, Chairman of LNDS’ Board of Directors.

The organisation’s annual event – [Data Summit Luxembourg](#) – gathered 500 local and international participants from academia, government, and industry to foster collaboration and advance data sharing and analysis. Led by addresses from Minister Stéphanie Obertin and Minister Elisabeth Margue, the event gave insights into Innovation throughout the Data Journey and marked the release of a significant milestone for Luxembourg, with the announcement of the Luxembourg AI Factory. The third edition of the Data Summit Luxembourg will take place 2 December 2025.

Adhering to its commitment to diversity and inclusion, LNDS signed the Diversity Charter Lëtzebuerg in May 2024. The diverse team grew with 80% compared to last year, becoming a team of 61 people, encompassing 32 different nationalities, and 38% women. LNDS thanks its people, partners and wider stakeholder community for the ongoing support in shaping Luxembourg’s data ecosystem together. As a

proof of its values on transparency, all data points of the LNDS Annual Report are published on the Luxembourgish Open Data platform and can be accessed [here](#).
